

# CIPH: Recommendations for camps and marinas

It is recommended to act pursuant to the following recommendations regarding the organization of camp and marina activities.

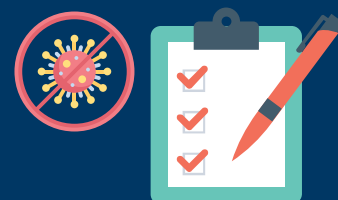

It is necessary to comply with the physical distancing rules of 1.5 meters in the entire camp/marina area (at the reception, tables in hospitality facilities, on the beaches, e.g. deckchairs, umbrellas, in the queues in front of bars, shops, kiosks, ice cream coolers, and similar). All areas containing seats, deck chairs and umbrellas should be arranged so that they are 1.5 meters away from each other. It is necessary to adhere to the rule on the maximum number of persons allowed indoors (facilities, official vehicle of the camp/marina, children in mini-clubs, sports and recreational facilities, and similar) pursuant to the defined criteria.

It is necessary to place disinfectant dispensers (alcohol-based with a concentration of no less than 70% or other agent with declared virucidal properties and which is safe on skin) at the entrance to the camp/marina indoor areas (reception, sports and recreational facilities, shops, kiosks, payment desks).

It is necessary to place information regarding hygienic procedures, which contain guidelines on proper behaviour and protective measures which should be followed, or which apply in that area, at a visible place at the entrance, as well as in the area where visitors are staying. The same information can be given to the visitors during check-in. Furthermore, information regarding the telephone numbers of medical centres, healthcare institutions, as well as who to contact if there is suspicion of COVID-19, should be published and placed in and around the facilities and/or provided to guests. The rule regarding the maximum number of persons allowed in certain areas must be adhered to pursuant with defined criteria of keeping a physical distance of 1.5 meters.

The wearing of medical masks or face masks, which cover the mouth and nose, is recommended while staying in the indoor areas of the hotel. It is necessary to ensure a sufficient quantity of face masks and gloves for all employees.

It is necessary to ensure a sufficient quantity of paper towels (napkins) and other disposable materials, as well as cleaning and disinfectant equipment and agents.

It is recommended that waste bins with suitable lids are placed in all indoor areas on the camp premises.

Regarding mobile homes, apartments and elsewhere where applicable, it is recommended that cleaning should be done only when guests depart (distancing measures should be used when replacing towels and bed linens, e.g. deliver clean linens and towels and take the dirty ones at the entrance into the premises).

Physical distancing at the reception. It is necessary to ensure sufficient physical distance between reception staff and the guest, as well as between the staff themselves. The check-in/check-out process should last no longer than 15 minutes (which is the definition of a close contact) or, if this is not possible, a barrier should be installed at reception (made from Plexiglass or similar material that ensures the required sanitary distance). The maximum number of persons in the reception area is regulated and restricted pursuant to the physical distancing measures between people of at least 1.5 meters. Sufficient space should be provided at the reception area in order to comply with physical distancing measures.

The reception staff should be adequately informed regarding COVID-19 so they can execute their assigned tasks without any issue and prevent the potential spread within the facilities. It should be possible to inform guests who are inquiring about camp / marina rules regarding the implementation of preventive measures or other services that guests may require (e.g. medical and pharmacy services available in the area or in the facility itself, telephone numbers of on-call medical institutions, emergency medical services, etc.).
